A Matter of Degree

DHL Global Forwarding's Airfreight Plus Europe service for the Life Science Industry provides an overnight, door-to-door delivery across Europe. Airfreight Plus Europe combines the speed of shipping associated with an express carrier with the individual care given by a freight forwarder.

In combining DHL's network capabilities with DHL Global Forwarding's secured air freight capacity, we offer the greatest choice in transporting complex freight – including temperature-controlled goods in passive or active packaging.

Our simple tariff allows you to calculate the cost of transporting your goods across Europe based on the weight of the goods, choice of transit speed and temperature sensitivity.

Customers benefit from a cost-effective, reliable service due to fixed processes and individual care provided by our dedicated Life Science logistics experts.

# INDIVIDUAL SERVICE FOR PHARMACEUTICAL PRODUCTS

With Airfreight Plus Europe DHL Global Forwarding is responding to the special requirements of the Life Science Industry. In combining fixed processes with individual service it is the ideal tool to optimize your supply chain.

DHL Global Forwarding benefits from an extended pan-European network with local expertise. Late cut-off times and our integrated supply chain network guarantee minimal tarmac times at origin, in transit and at destination.

Our experienced and especially trained staff handle your shipments individually at our temperature-controlled transit facilities.

With our advanced IT systems we also ensure the visibility and transparency of all relevant data. DHL Global Forwarding's tracking system gives you the ability to track shipments by your own reference, shipment or article number. Moreover, with its optional 24h process management for temperature sensitive products by the European Life Science Service Center\*\*, DHL Global Forwarding is able to take over the entire freight management for all Life Science Industry customers.

Airfreight Plus Europe offers unrivalled flexibility in both the choice of speed and type of goods shipped. In choosing this service our customers can be assured that they meet their needs for a high-quality supply chain while at the same time it leads to reduced shipping costs.
