

APPENDIX NUMBER RANGES (TO ANNEX BILLING & PAYMENT ARRANGEMENTS)

ATTENTION: If your shipment numbers increase significantly and the repetition of shipment numbers within a short period of time is foreseeable, please contact your sales representative. Clause 3.3.2 of the agreement applies. The same shall apply if the agreed products / services change and this thus has an effect on the number ranges. If required, this respectively updated appendix number ranges can be posted to the sender.

You can find your number ranges in your personal menu of the Post & DHL Business Customer Portal under “Vertragsdaten” (contract data). There you can determine the scope of your number ranges, i. e. the number of shipments per year already assigned to you through your number range.

KEY*

Billing Number: The billing number is a 14-digit character string. It is composed of the customer number, the settlement procedure (=product) and the attendance. The correct spelling is without spaces or special characters (all 14 characters directly one after the other).

Example:

Billing number	=	Customer number	+	Settlement Procedure	+	Attendance
0123456789 01 01	=	0123456789	+	01	+	01

Settlement Procedure: Settlement Procedure are the products that are used for shipping.

Attendance: The so-called attendance is a two-digit numeric (00 to 99) or alphanumeric (AA to ZZ) character string. It is assigned by the sales department. For each DHL product (so-called settlement procedure), a customer can use one or more attendances. It is therefore recommended to keep the number of attendances variable when configuring the interface. The attendances enable the subdivision of settlements, for example, according to locations, seasonal business or different conditions.
